

THE “WHEELIE” BIKE STAND TROLLEY USER GUIDE

Place your Universal Bike Stand (a) on the floor.
Fit the rear wheel ramp (b) to the Universal Bike Stand using the 10mm nuts provided.

Make sure all six castors (c) are in the raised position, using the socket spanner (d) provided.

Push or ride your bike into the Universal Bike Stand, making sure your bike is in a straight line, and the socks are in place at the front of the stand. Ensure that you are satisfied that your bike is properly engaged in the Universal Bike Stand at the front of the trolley.

You can then lower the six castors to their limit, using the socket spanner. The bike can now be carefully moved around.

BEWARE ON UNEVEN SURFACES.

Please make sure that there are no obstructions, and move the bike slowly when changing direction. If storing your bike on the trolley it is essential that you check the tyre pressures regularly, and for maximum stability the castors must be raised so the trolley is resting on the floor.

When removing your bike from the trolley take care and ensure you are in control.

We want you to be happy with your product!
